Table of Contents

Foreword	VII
Abbreviations and symbols	XI

1. Neutron/Nucleus Interactions and Fission

1.1	Neutron-Nucleus Interactions -----	1
1.1.1	Cross Sections	
1.1.2	Types of Interaction	
1.1.3	Reactions of Importance in a Fission Reactor	
1.2	Fission -----	8
1.2.1	Energy Produced in Fission	
1.2.2	Distribution of Fission Products	
1.3	Production of Neutrons-----	12
1.3.1	Production of Prompt Neutrons	
1.3.2	Production of Delayed Neutrons	
1.3.3	Photoneutrons	
1.4	Delayed-Neutron Groups -----	17
1.4.1	Characterization of Delayed-Neutron Groups	
1.4.2	Delayed-Neutron Fraction	
1.4.3	Delayed-Neutron Emission Spectrum	
1.5	Conclusion-----	22

2. The Diffusion Equation and the Steady State

2.1	Neutron Balance in a Reactor -----	25
2.1.1	Transport Equation	
2.1.2	Continuity Equation	
2.2	The Diffusion Equation -----	34
2.2.1	PI Approximation	
2.2.2	Diffusion Approximation	
2.2.3	Delayed-Neutron Source	
2.2.4	Boundary Conditions	
2.2.5	Multigroup Formalism	
2.3	Time-Independent Equation and Eigenvalue Problem-----	46
2.3.1	Steady State and Criticality	
2.3.2	Effective Multiplication Constant and Static Reactivity	
2.4	Perturbation Theory and Flux Adjoint-----	60
2.4.1	First-Order Perturbation Theory	
2.4.2	Perturbation Formulas for the Reactivity	
2.4.3	Adjoint Equation	
2.4.4	Importance of Adjoint Weighting	
2.5	Conclusion-----	75

3. The Point Kinetics Equation

3.1	General Formulation-----	78
	3.1.1 Flux Factorization	
	3.1.2 Normalization Constraint	
	3.1.3 Amplitude Equations	
3.2	Common Formulations of the Point Kinetics Equations -----	84
	3.2.1 Formulation for an initially Critical Reactor	
	3.2.2 Dynamic Reactivity	
	3.2.3 The Choice of Weighting Function	
	3.2.4 Conventional Forms of the Point Kinetics Equations	
	3.2.5 Formulation for an Initially Subcritical Reactor	
3.3	Point Model and Interpretation of the Kinetics Parameters -----	95
	3.3.1 "Point" Reactor Models	
	3.3.2 Interpretation of the parameters	
3.4	Integral Formulation of the Equation -----	103
3.5	Conclusion -----	105
