

Chemistry - PI 24

SECONDARY SYSTEM - MATERIALS

Objectives:

Given access to plant manuals or plant data sheets, the trainee will fill in the work sheet attached for the station to which he has been deployed. (If not deployed to a station, choose Pickering or Bruce).

In module 21-1 and 21-2 we discussed how various impurities affect the system and how the system chemistry is controlled to maintain system integrity. You will recall that it is the system materials which indicate the system chemistry.

Here's What To Do:

1. Select the station for which you will find data.
2. Ask the course manager for reference material.
3. Fill in the data sheet and have it initialled by the course manager.

Note: Information from this module will not need to be memorized for check-out purposes.
