
NEUTRONIC
ANALYSIS OF
REACTORS

Jean Koclas

About the Author

THE AUTHOR is currently professor of nuclear engineering at Ecole Polytechnique de Montréal. He is a graduate of McGill University, of Ecole Polytechnique de Montréal, and of the Massachusetts Institute of Technology (Ph.D., 1980). He worked at the Chalk River Laboratories (AECL) as a research scientist, and at the Gentilly-2 NGS of Hydro-Québec before he joined the Nuclear Engineering Institute of the Mechanical Engineering Department in 1992. Most of his research interests are in the areas of nuclear reactor simulation and space-time kinetics.

Foreword

THE MATERIAL PRESENTED here are the notes prepared by the author for a series of advanced lectures given both at Chulalongkorn University, Bangkok, Thailand, and at Ecole Polytechnique de Montréal, Montréal, Canada, in the winter months of 1998.

The subject matter covers a broad spectrum of the methods used to solve reactor physics problems in both the steady state and the non-stationary cases. Most of the emphasis is put on the methods of space-time kinetics, although very specific aspects of reactor statics are discussed.

Using the contents of these notes as a starting point, much of the current scientific literature on reactor physics should be within grasp of the reader. Also, the structure, and much of the technical contents, of many

of the modern computer codes used for complex reactor physics simulations become much clearer.

The background material required includes basic knowledge of reactor physics, linear algebra, and numerical analysis. The mathematics are derived with much of the intermediate steps included, so that it is easier for the reader to go through them.

Table of Contents

About the Author **iii**

Foreword **v**

CHAPTER 1

Introduction **17**

Steady State Calculations **18**

Space-Time Kinetics **19**

CHAPTER 2

Parameter Definitions **21**

Introduction **21**

Neutron Flux and Neutron Density **22**

Neutron Current **22**

Cross-sections **23**

Delayed Neutrons and Precursors **24**

Table of Contents

Prompt and Delayed Neutron Spectra 25

CHAPTER 3 *Derivation of the Space-Time Kinetics Equations* 27

Neutron Conservation 28

Neutron Flux Equation 33

Precursor Conservation 33

Final Result 35

CHAPTER 4 *Energy Condensation* 37

Energy Partitioning 37

Multigroup Reduction 39

Diffusion Equations in Terms of Energy Groups 42

CHAPTER 5 *Matrix Form of the Equations* 45

CHAPTER 6 *Spatial Mesh Considerations* 49

Reactor Core 49

Cell 50

Raw Core 52

Boundary Conditions 60

Basic Model 60

CHAPTER 7 *Statics* 63

Static Diffusion Equations 64

One Dimensional Formulation and Coordinate System 65

Classical Finite Differences 66

Mesh Centered Finite Differences 70

Matrix Structure 74

Table of Contents

CHAPTER 8	<i>Elementary Numerical Methods in Reactor Statics</i>	79
	Vector Norms	79
	Power Method	80
	Solution Strategy	89
	Matrix Norms	91
	LU Decomposition	92
	Iterative Methods	95
CHAPTER 9	<i>Kinetics Methods Classification</i>	105
	Separation of Variables	106
	Synthesis Methods	106
	Direct Methods	106
CHAPTER 10	<i>Point Kinetics</i>	107
	Derivation	107
	Point Kinetics Approximation	112
	Analytic Solution	113
	Conclusion	120
CHAPTER 11	<i>Numerical Integration Techniques</i>	123
	Criteria	123
	Explicit Method	125
	Implicit Method	129
	Crank-Nicholson Method	132
	Theta Method	136
CHAPTER 12	<i>Adiabatic Method</i>	137
	Asymptotic Period	138
	Adiabatic Approximation	141

Table of Contents

	Adiabatic Reactivity	143
CHAPTER 13	<i>Quasistatic Method</i>	145
	Flux Factorization	145
	Time Intervals	146
	Mathematical Formulation	147
	Application Domain	149
CHAPTER 14	<i>Modal Synthesis</i>	151
	Modal Notation	151
	Mathematical Derivation	152
	Equation Structure	156
	Choice of Modes	158
	Lambda Modes	158
CHAPTER 15	<i>Mesh Centered Finite Differences</i>	161
	Geometry and Notation	162
	Spatial Discretisation	163
	A One-Dimensional System Within a Node	166
	Flux Equation	167
	Equation for the Currents	172
	Final Form of the 1-D System	173
	Finite Difference Approximation	174
	Coupling Coefficients	180
	Flux Equation	181
	Precursor Equations	183
	Boundary Conditions	183
	Matrix Formulation	183

Table of Contents

CHAPTER 16	<i>Time Integration of the Space Time Kinetics Equations</i>	187
	Theta Method	187
	Exponential Transforms	193
CHAPTER 17	<i>Comparisons of Spatial Approximations</i>	197
	Analytic Nodal Method	197
	Reactor Model	198
	Comparisons	199
	Effective Multiplication Factors	199
	Errors on the Fluxes	200
