# **Chemical Wastes**

**PCBs** 

#### **Polychlorinated Biphenyls** (PCBs)

- Used in electrical equipment
- Potentially carcinogenic
- Use discontinued (1977-1990)
- Need to be safely disposed off
  - Liquid
  - Contaminated equipment
  - Contaminated solids (e.g., soil, etc.)

### **Processes for Destroying PCBs**

- Incineration (> 1200°C)
- Cement kiln (incineration)
- Plasma arc
- Miscellaneous (>80)

# **Incineration of PCBs**

- Limitations
  - Licensing difficult
    - License denied in Boston
  - Solids need to be heated to 1200°C to pyrolyze small amounts (ppm)
  - Costs \$1-2/kg for liquids, very high for solids

# **Radiolysis Process**

## -Advantages

- Absence of oxygen no dioxins or dibenzofurans
- On-line monitoring
- Bulk PCBs and PCB-contaminated items
- Toxic waste -> useful products

## **Key Reactions**

```
(CH_{3})_{2}CHOH \longrightarrow (CH_{3})_{2}\dot{C}OH
(CH_{3})_{2}\dot{C}OH \longrightarrow (CH_{3})_{2}CO^{-} \text{ (in the presence of KOH)}
(CH_{3})_{2}CO^{-} + RCI \longrightarrow (CH_{3})_{2}CO + \cdot R + CI^{-}
(CH_{3})_{2}CHOH + \cdot R \longrightarrow (CH_{3})_{2}\dot{C}OH + RH
Overall reaction
```

PCBs + OH<sup>-</sup> + (CH<sub>3</sub>)<sub>2</sub>CHOH  $\longrightarrow$  biphenyl + acetone + salt

#### Estimated Costs for Radiation Processing of Liquid PCBs (in 1987\$)

Radiation Source	Maximum Rate (kg/h)	Cost (\$/kg)
Mobile facility		
(200 kCi Co-60)	9	13.95
<b>Permanent Facility</b>		
1 MCi Co-60	101	4.22
40 kW accelerator	195	2.1
